Review articles
Navigational challenges in the oceanic migrations of leatherback sea turtles
A. Sale & P. Luschi

Research articles
Lift production in the hovering hummingbird
D. R. Warrick, B. W. Tobalske & D. R. Powers

The smallest avian genomes are found in hummingbirds

Protection of Salmonella by ampicillin-resistant Escherichia coli in the presence of otherwise lethal drug concentrations

Evidence for regular ongoing introductions of mosquito disease vectors into the Galapagos Islands

Whether depositing fat or losing weight, fish maintain a balance
O. Brix, R. Grüner, I. Rønnestad & T. Fekatsu

Prelife catalysts and replicators
H. Ohishi & M. A. Nowak

Longicorn beetle that vectors pinewood nematode carries many Wolbachia genes on an autosome

The endosymbiont Wolbachia increases insulin/IGF-like signalling in Drosophila
T. Ikeya, S. Broughton, N. Alic, R. Grandison & L. Partridge

Adaptive basis of geographic variation: genetic, phenotypic and environmental differences among beach mouse populations
L. M. Mullen, S. N. Vignieri, J. A. Gore & H. E. Hoekstra

Behaviour and kinematics of continuous ram filtration in bowhead whales (Balaena mysticetus)
M. Simon, M. Johnson, P. Tyack & P. T. Madsen

Seventy-five-million-year-old tropical tetra-like fish from Canada tracks Cretaceous global warming

Inferring population histories using cultural data
D. S. Rogers, M. W. Feldman & P. R. Ehrlich

Cooperation of adaptive technology, maladaptive culture and population size in a producer–scrounger game
L. Lehmann & M. W. Feldman

Cooperative breeding in South American hunter–gatherers
K. Hill & A. M. Hurtado

Does coevolution promote species richness in parasitic cuckoos?
O. Krüger, M. D. Svensson & N. B. Davies

First record of a pterosaur landing trackway
J.-M. Mazin, J.-P. Billon-Bruyat & K. Padian

Invasive plant integration into native plant–pollinator networks across Europe
M. Viitala, J. Bartomeus, A. C. Dietzsch, T. Petanidou, I. Steffan-Dewenter, J. C. Stout & T. Tscharke

No intracolonial nepotism during colony fissioning in honey bees
J. Range, H. B. Mattila & T. D. Seeley

Determinants of echolocation call frequency variation in the Formosan lesser horseshoe bat (Rhinolophus monoceros)
S. F. Chen, G. Jones & S. J. Rossiter
The Royal Society is an independent scientific academy founded in 1660 and self-governing under Royal Charter. The Royal Society is a Registered Charity No. 207043.

The Royal Society welcomes articles of high quality in all aspects of biology that will be of interest only small groups of workers in biology. Authors are encouraged to submit articles not only in these fields, but in all branches of biology.

The criteria for selection are scientific excellence, originality and potential interest to a wide spectrum of biologists. Papers to be published must ensure accurate, accessible and accurate knowledge of a biological science that will be of interest to non-specialists. Review papers are commissioned but unsolicited reviews will be considered.

Comment papers. Short additions to, or criticisms of, papers already published in PLoS Biology will also be considered. The editor, the authors of the original paper may be invited to reply. Comment papers should be short, interesting and conform to the rules of good manners.

Selection criteria
The criteria for selection are scientific excellence, originality and interest across disciplines within biology. The Editors are responsible for all editorial decisions and they make these decisions based on the reports received from the referees and/or Editorial Board members.

Authors must not have previously published, nor be under consideration for publication elsewhere. The main findings of the article should not have been reported in the mass media. Like many journals, Proc. R. Soc. B employs a strict embargo policy where the release of a scientific article by the media is embargoed until a specific time. The Editor-in-Chief has final authority in all matters relating to publication.

Electronic Submission details
The Royal Society’s electronic-submission and peer-review service provides Proc. R. Soc. B authors with the facility to submit their papers online. The service allows you to upload files in a reliable and user-friendly way, using a web-based system. When your paper is received, an immediate acknowledgement is sent that details how you can track your contribution online.

For full submission guidelines and access to all journal content please visit the Proc. R. Soc. B website, for further details see rspb.royalsocietypublishing.org.

GUDANCE FOR AUTHORS

Cover image: The Black-chinned Hummingbird (Archilochus alexandri), which has the smallest genome size reported to date for birds. This is one of 37 species of hummingbirds studied by Gregor et al. (pp. 3753–3757), revealing strong constancies on genome size in these birds with glowing fleshy and ornate metallic tails. Photo by Luis Mazarrasa. 

The Royal Society is an independent scientific academy founded in 1660 and self-governing under Royal Charter. The Society has three roles, as the scientific academy of the United Kingdom, as a learned society, and as a funding body. The Royal Society is an independent scientific academy founded in 1660 and self-governing under Royal Charter. The Royal Society is a Registered Charity No. 207043.
