

BEMP & Watershed Watch Share Research Results

On Thursday and Friday, April 24 and 25, 2014, nearly 220 4th to 12th-grade students gathered at El Rancho de los Golangrinas near Santa Fe and Bosque School in Albuquerque to share their research results from participation in the Bosque Ecosystem Monitoring Program (BEMP) and Watershed Watch. Students continued their trend of immersing themselves in learning about science by learning about birds of prey, aquatic invertebrates, reptiles and amphibians, water use and conservation, and mammals. BEMP is a partnership between The University of New Mexico (UNM) Department of Biology and Bosque School, and conducts outreach for the Sevilleta Long Term Ecological Research site. For more information, please visit the [Bosque School website](#).
